

We are offer folling services:

OSTEOPATHIE ☒ ETIOPATHIE

"Osteo" steht für Knochen und "pathie" für Krankheit oder Leidenschaft. Diese Übersetzung lässt vermuten, dass es sich bei der Osteopathie um die Behandlung von Knochenkrankheiten handelt.

Doch Osteopathie ist hier ein philosophischer Begriff und steht für eine systemische manuelle Medizin, welche die Ursache (Knochen) der Krankheit oder die Leidenschaft für den menschlichen Knochenbau beschreibt.

In der Osteopathie wird nicht nur die Krankheit behandelt sondern die natürlichen Heilungsprozesse des Körpers gefördert. Schon nach einer Behandlung sind oft deutliche Verbesserungen spürbar. Bei chronischen Problemen bedarf es häufig mehrerer Sitzungen, da sich das Gewebe mit der Zeit an die Problematik anpasst (Unelastizität).

[LERNEN SIE UNSER OSTEOPATHIE-TEAM KENNEN](#)

INTEGRATIVE MEDIZIN

„Gesundheit ist ein Zustand vollständigen körperlichen, geistigen und sozialen Wohlbefindens und nicht nur das Freisein von Krankheit oder Gebrechen.“
(Verfassung der WHO, deutsche Übersetzung)

Integrative Medizin verbindet schulmedizinische und komplementärmedizinische Ansätze, um die Gesundheit und das Wohlbefinden der Patientinnen und Patienten ganzheitlich und nachhaltig zu fördern.

Im Mittelpunkt steht ein individuell abgestimmtes Diagnose- und Therapiekonzept, das die Selbstheilungskräfte gezielt aktiviert. Dabei werden die komplexen Zusammenhänge zwischen Körper, Geist und Seele berücksichtigt.

Komplementärmedizinische Verfahren wie Osteopathie, Faszientherapie, Orthomolekulare Medizin, Phytotherapie, Homöopathie, Akupunktur, Funktionelle Myodiagnostik und Neuraltherapie werden gezielt mit schulmedizinischen Maßnahmen kombiniert. So entsteht eine personalisierte, effektive und präventiv orientierte Behandlung.

Schwerpunkte unserer integrativen Medizin:

- Orthomolekulare Medizin
- Darmgesundheit & Mikrobiom

- Mitochondrienmedizin / Mitochondrienpathien
- Chronisches Fatigue-Syndrom (CFS)
- Schwermetallausleitungen
- Hormonregulation
- Parasiten, SIBO (Dünndarmfehlbesiedlung)
- Antikörper- und Immundiagnostik
- Analysen von Mineralstoffen & Aminosäuren

Darmreinigung in Zürich: Colon Hydro Therapie für Gesundheit und Wohlbefinden

Entdecken Sie die Vorteile unserer Colon Hydro Therapie in Zürich!

In einer Welt, in der Gesundheit, Schönheit und Wohlbefinden immer mehr in den Fokus rücken, wird oft der Darm vernachlässigt. Dabei ist der Darm das grösste Immunsystem unseres Körpers. Eine effektive Darmreinigung ist entscheidend für Ihre Gesundheit und kann viele Beschwerden lindern.

Warum ist eine Darmreinigung wichtig?

Im Laufe der Zeit sammeln sich im Darm Abfallstoffe und alte Stuhlreste an, die sich in den Taschen der Darmwand ablagern. Diese Rückstände können nicht immer selbstständig vom Dickdarm ausgeschieden werden, was zu Beschwerden und sogar ernsthaften Krankheiten führen kann. Zudem kann die Produktion wichtiger Botenstoffe beeinträchtigt werden, die für unser Wohlbefinden entscheidend sind.

Was bewirkt die Colon Hydro Therapie?

Bei der Colon Hydro Therapie bei uns in Zürich wird der Dickdarm durch eine spezielle Darmwäsche gereinigt. Dabei fliesst warmes, gefiltertes Wasser durch ein geschlossenes Zweiweg-System in den Darm und wieder hinaus. Diese wiederholten Spülungen beleben den trägen Darm und regen dessen Bewegung sowie Stoffwechselaktivität an.

Einsatzbereiche unserer Colon Hydro Therapie in Zürich

Die Colon Hydro Therapie ist ein vielseitiges Verfahren, das in verschiedenen Bereichen eingesetzt wird, um das Wohlbefinden zu f

Therapeutische Anwendungen

Dieses effektive Körperreinigungsverfahren unterstützt die Entgiftung der Darmschleimhäute, des Lymphsystems und des Bindegewebes. Durch die Reinigung entstehen saubere Versorgungs- und Entsorgungswege zwischen Darm, Lymphe, Blut und Zellen. Dies ermöglicht

die effektive Entfernung von Stoffwechselabfällen und fördert den Transport wichtiger Nährstoffe zu den Zellen.

Kosmetik und Anti-Aging

In der kosmetischen Anwendung zeigt die Darmreinigung zunehmend positive Effekte auf das Hautbild und die allgemeine Vitalität. Durch die reinigende und entgiftende Wirkung kann die Therapie dazu beitragen, Cellulite zu reduzieren und das Hautbild zu straffen. Die Ergebnisse sind nachhaltiger und gesünder im Vergleich zu rein äusserlichen kosmetischen Anwendungen.

Mikrobiom und Verdauungsgesundheit

Das Mikrobiom spielt eine entscheidende Rolle für unsere Gesundheit. Eine gesunde Darmflora ist essenziell für das körperliche und geistige Wohlbefinden. Mit unserer Colon Hydro Therapie in Ihrer Nähe können wir positiv auf das Mikrobiom einwirken und dessen Zustand verbessern, was zur Steigerung des allgemeinen Wohlbefindens beiträgt.

Prophylaxe & Gesundheitsvorsorge

Vorbeugung ist der Schlüssel zu einer langfristigen Gesundheit. Eine gesunde Ernährung und ein vitaler Darm sind die Grundlagen dafür. Angesichts der Vielzahl an Umweltgiften in unserer Nahrung wird empfohlen, regelmässig Darmreinigungen bei uns in Zürich in Anspruch zu nehmen, um den Körper von Toxinen zu befreien und das Wohlbefinden zu steigern.

Empfehlung für Gesundheitsbewusste:

Man kann sich die Anwendung der Colon-Hydro-Therapie wie eine Kur vorstellen, bei der empfohlen wird, 1- bis 3-mal pro Jahr insgesamt 6 Therapien im Abstand von jeweils einer Woche durchzuführen.

[Jetzt Buchen](#)

Wenn Sie mehr über die Einsatzmöglichkeiten der Colon Hydro Therapie erfahren möchten oder eine individuelle Beratung wünschen, stehen Ihnen unsere Experten jederzeit zur Verfügung.

MEDICAL MASSAGE

The goal of medical massage is to release cramped and tense muscles. Various massage techniques are used to treat problem areas, either broadly or by focusing on specific points. Classical massage improves blood circulation, regulates muscle tone, and helps eliminate toxins. In this way, massage promotes overall well-being.

In foot reflexology, we primarily work on the soles of the feet. Every organ is located at a specific point on the foot and can thus be influenced reflexively. This indirectly leads to relaxation.

Hot stone massage is generally considered a wellness massage. However, hot stones can also be used effectively and in a targeted way during a classic massage. The treatment procedure differs only slightly from a classic massage.

Sports massage involves deeper tissue work and uses additional massage techniques compared to traditional massage. It is specifically designed for athletes who want treatment immediately before and after competition: before the competition to activate the muscles, and afterward to regenerate and detoxify them.

[GET TO KNOW OUR TEAM](#)

[FURTHER INFORMATION AND PRICES](#)

CLASSIC MASSAGE

- Depending on your preference, you can massage parts or the whole body.
- Muscle tension is released and tone is regulated.
- It helps you feel more relaxed after a stressful day.

Classical massage involves treating all the muscles of the musculoskeletal system with various massage techniques. The aim is to regulate tension and stiffness in the affected areas of the body and thus contribute to improved well-being.

HOT STONE MASSAGE

- The heat also improves blood circulation.
- Supplement to classic massage
- Especially pleasant during the colder months

Hot stone massage is an extension of classic massage; the additional heat from the stones allows for treatment of particularly tense and hardened muscles and further stimulates blood circulation.

JAPANESE FACIAL MASSAGE

- Face and décolleté become naturally wrinkle-free and relaxed.
- The contour of the chin and the shape of the face are tightened.
- Skin structure improves

A firming facial massage helps maintain youth and beauty naturally. This unique method demonstrates how effective and deep facial massage can tighten the contours of the chin and shape of the face, brighten the eyes, and accentuate the cheekbones. The neck, head, and décolleté are also included in this massage technique. You will notice a change in your skin texture and facial shape after just a few sessions. This massage is highly recommended for women and men who want to achieve a fresh and younger appearance in the shortest possible time – in a completely natural way.

LOMI LOMI MASSAGE - DEEP TISSUE MASSAGE FROM HAWAII

- Queen of massages from the volcanic islands
- It serves deep relaxation and regeneration.
- Lomi Lomi means deep massage.

Full body treatment involving deep massage at the muscular level; tension can be released, and the joints are gently mobilized.

Lomi Lomi massage is called “massage of the wise” in Hawaii and is part of a holistic natural healing system that was traditionally passed down only within families.

PREGNANCY MASSAGE

- Relieve tension in the neck and lower back
- Avoid and reduce water retention
- Postnatal recovery

This massage, based on Ayurvedic and Hawaiian principles, was developed to relieve tension during and after pregnancy, as well as to support the mother's recovery after childbirth.

Pregnancy massage is performed in side-lying positions, as well as in supine positions supported with a pillow.

This massage can be performed from week 13 of pregnancy onwards.

ANTI CELLULITE MASSAGE

- Connective tissue is tightened.
- Buttocks, abdomen, thighs are the most common treatment areas.
- After regular use, the skin looks permanently firmer.

The special massage techniques stimulate blood circulation and lymphatic flow. As a result, adhesions are released and connective tissue is tightened. With regular use, the skin looks permanently younger and smoother. Consequently, the connective tissue gains a flexible, firm, and healthy structure.

Foot reflexology massage

- very relaxing for general well-being
- Organs can be stimulated via the reflex zones.

Foot reflexology is based on the idea that specific points on the feet are connected to various organs and areas of the body. Gentle pressure on these reflex zones is intended to stimulate the body's self-healing abilities and improve overall well-being. This method is often used to promote relaxation and support health.

MANUAL LYMPHATIC DRAINAGE

- Removal of water retention
- Relief in the affected body region
- Gentle treatment method

Manual lymphatic drainage is primarily used to treat fluid retention in the tissues, whether due to surgery or generally poor circulation. By stimulating the lymph nodes and then draining the affected area, the fluid is removed, providing relief to the tissues.

Shiatsu Massage – Japanese Art of Acupressure

Experience deep relaxation and renewed energy: Targeted pressure on acupressure points releases tension, mobilizes joints and harmonizes the energy flow (Chi).

Shiatsu is based on traditional principles of Far Eastern medicine and promotes physical, mental, and emotional balance. Ideal for stress, muscle tension, or lack of energy – also for regeneration in athletes.

- Please bring light clothing (training pants, T-shirt).

Mental Coaching

Ziele des Mental Coachings

1. Förderung der mentalen Gesundheit und inneren Balance
2. Erkennen und Nutzen persönlicher Ressourcen
3. Verbesserung von Konzentration, Fokus und emotionaler Stabilität
4. Aufbau von Resilienz und Selbstwirksamkeit in herausfordernden Situationen
5. Förderung von Lebensqualität, Motivation und ganzheitlichem Wohlbefinden

Das Mental Coaching richtet sich an Menschen, die ihre mentale Stärke und ihr Wohlbefinden gezielt fördern möchten – im Alltag, im Beruf oder im Sport.

Es eignet sich besonders für Personen, die in einem anspruchsvollen Umfeld stehen, Leistung erbringen und gleichzeitig Wert auf Ausgeglichenheit, innere Ruhe und persönliche Entwicklung legen. Typische Themen und Anliegen sind:

1. **Beruf und Alltag:** Gelassenheit, Fokus und Erholung in anspruchsvollen Situationen
2. **Sport:** Mentales Training zur Steigerung von Motivation, Leistung und Zielklarheit
3. **Gesundheit und Lebensbalance:** Stressbewältigung, gesunde Routinen und Resilienzförderung
4. **Veränderungsphasen:** Personen, die ihre Ziele neu ausrichten und Herausforderungen bewusst angehen möchten.

Methoden und Schwerpunkte

Die Begleitung orientiert sich an wissenschaftlich fundierten Ansätzen aus der Psychologie, Gesundheitsförderung und Mentaltraining. Schwerpunkte sind:

1. **Ressourcenaktivierung** – Erkennen und Nutzen persönlicher Stärken
2. **Emotions- und Stressregulation** – konstruktiver Umgang mit Gedanken und Gefühlen
3. **Resilienzförderung** – Aufbau von Widerstandskraft und Erhaltung der inneren Balance
4. **Achtsamkeit und gesunde Routinen** – Strategien für Erholung, Fokus und Balance
5. **Mentales Training** – Steigerung von Fokus, Leistung, Motivation und Zielklarheit
6. **Hypnose** – Förderung von Selbstregulation, Aktivierung und gezielter Nutzung eigener Ressourcen

Ziel

Ziel des Mental Coachings ist es, Gedanken und Emotionen bewusst zu steuern, Herausforderungen gelassener zu begegnen und Körper und Psyche in Einklang zu bringen – für mehr innere Stärke, Leistungsfähigkeit und ganzheitliches Wohlbefinden.

Treatment of the musculoskeletal system / conservative and surgical orthopedics

The orthopedic-traumatological, sports medicine and rheumatological work of our medical staff is based on the latest state of medical knowledge and is complemented by modern medical technology.

However, in our view, the decisive factor lies in the personal and human doctor-patient relationship: a thorough consultation, listening attentively, and the joint consideration and coordination of all treatment options. The goal is always the rapid and complete recovery of the patient, with a view to the sustainable and preventative stabilization of the achieved progress.

In all cases involving physical illnesses, we always take into account your individual needs, future visions and current life situation.

Here at functio med , our highest goal is to give you inner joy in your body. We have thus carried the Roman wisdom "Mens sana in corpore sano" (A healthy mind in a healthy body) into modern times...

[Medical team Orthopedics and Traumatology](#)

roentgen

Functio med has a state-of-the-art, fully digital X-ray machine that enables immediate primary radiological diagnostics with minimized radiation exposure. For the musculoskeletal system, this is an indispensable basis for clarifying or monitoring the progression of many conditions.

laboratory

In our own functio med laboratory, we can perform rapid basic diagnostics and, in cooperation with an external laboratory, comprehensive laboratory diagnostics.

Ultrasonic

We have a state-of-the-art ultrasound machine for precise structural and functional examinations, as well as targeted, image-guided injections. Sonography is gentle, painless, and involves no radiation exposure. Even during dynamic movement, structures and specific injury patterns can often be clearly visualized.

Focused extracorporeal shock wave therapy

Extracorporeal shock wave therapy (ESWT) is particularly useful for treating calcifications, tendon insertion pain, and poorly healing bone fractures. Before ESWT, an initial consultation is held to determine its suitability and likelihood of success. The procedure is discussed, and cost approval is obtained (ESWT is not a standard benefit covered by basic health insurance; however, coverage may vary depending on supplemental insurance). The cost is CHF 220 per session. Possible applications include: tendon calcifications, tennis/golfer's elbow, soft tissue calcifications, bursitis, patellar tendinitis, plantar fasciitis, heel spurs, poor fracture healing, pseudoarthrosis, and stress fractures of the extremity bones.

fluoroscopy-guided infiltration therapy

Image-guided interventional pain therapy, also known as fluoroscopy-guided infiltration therapy, involves the injection of an anti-inflammatory medication combined with a local anesthetic directly into the joint or precisely at the site of inflammation. This is done using a fine needle under X-ray guidance, precisely targeting the source of the pain, such as a worn joint or an irritated, or "pinched," nerve in the spinal region. This therapy can achieve rapid relief of symptoms, sometimes with a long duration of effect.

Sports medicine

Complaints arising from athletic activity are generally functional in nature. These are usually caused by an imbalance between stress and resilience. Through targeted medical history, physical examination, and, above all, functional and biomechanical analyses, the cause can be identified and addressed. Crucial to this is the relationship between stability, mobility, and functional-anatomical movement patterns. Prevention is particularly important in sports-related orthopedic conditions. Repetitive, unphysiological movement patterns can quickly lead to permanent overuse injuries. After an accident, it is equally important to find the right balance between the pre-injury condition, early functional treatment, and respecting the current limits.

Sports medicine encompasses prevention, sports medicine check-ups, blood tests, sports rehabilitation after injuries, overuse and operations, advice regarding return-to-sports and training advice.

Traumatology of the musculoskeletal system

An accident involving injury to joints, tendons, or muscles, for example, during daily activities, at work, or while playing sports, can often lead to a significant and short-term impairment for the patient. In such cases, rapid and comprehensive diagnostics are essential. The earlier a diagnosis is made and any necessary further investigations can be initiated, the sooner appropriate therapy—whether conservative or surgical—can begin. Here, too, early functional rehabilitation is paramount for most injuries today. The goal is a return to daily life, work, or sports as quickly as possible.

Spinal disorders

Spinal problems can be functional in nature, such as those caused by poor posture, excessive strain, or restricted movement. These can often be alleviated or resolved with targeted physiotherapy, manual therapy, and osteopathic treatments, as well as with supportive medications or targeted injections. Following treatment, a targeted prevention program should be implemented to prevent future problems. On the other hand, there are degenerative spinal diseases in which structural damage is already present (osteoarthritis of the facet joints, herniated disc, spinal stenosis). Here, too, targeted therapy initially focuses on symptom relief. Secondary prevention measures can also help prevent recurrence of these conditions.

rheumatology

Rheumatology deals with the diagnosis and treatment of diseases of the musculoskeletal system. This includes joints, muscles, tendons, and bones. Our goal is to alleviate pain, maintain mobility, and improve quality of life. Whether inflammatory diseases such as arthritis, back pain, or degenerative changes – at functionmed AG, we offer individually tailored therapies and holistic care. Our specialists will expertly guide you on your path to better health and well-being.

Arthroscopy and joint surgery

At functio med , we combine the strengths of various treatment options for the maximum benefit of our patients. We can successfully treat well over 90% of joint disorders functionally or conservatively. However, in cases of extensive structural damage, a surgical strategy may be the right option. In accordance with the functio med philosophy , surgical procedures are performed minimally invasively, prioritizing biological and joint preservation. Our aim is perfection, and healthy anatomy serves as our model. Surgical reconstructions aim to restore your joint function for sports, leisure, and work. The indications (necessity, risks, alternatives, and prospects) are always discussed as a team.

Orthokine / ACP / Autologous blood therapy

These methods are suitable for treating tendonitis (Achilles tendon, golfer's elbow, tennis elbow, knee) or acute muscle injuries. The patient's blood is drawn venously and processed in a centrifuge to remove the red blood cells. The difference between Orthokine and ACP lies in the processing of the patient's blood. The plasma contains blood components that have anti-inflammatory properties. These are then injected, sometimes guided by ultrasound, into the injured or inflamed area. This can promote and accelerate the reduction of inflammation.

Manual Medicine

Manual therapy by a physician encompasses the treatment of acute and chronic back and joint

pain. Imbalances in the interplay of these systems can lead to acute, painful blockages and functional limitations. Often, just a few sessions are sufficient to achieve pain reduction; however, for lasting relief in cases of recurring pain, collaboration with physiotherapists and active muscle strengthening and stabilization are necessary.

MRI | Magnetic Resonance Imaging

Through close cooperation with selected radiology practices, we are able to perform timely, advanced imaging diagnostics when needed. MRI is the most valuable imaging technique for the objective assessment of the soft tissue structures of the entire musculoskeletal system. It does not use X-rays and instead utilizes a magnetic field.

Bone density measurement

Bone density measurement (DEXA) is a procedure for objectifying and quantifying your bone density. The information obtained allows for modern and guideline-compliant primary prevention or treatment of osteoporosis.

Myofascial trigger point therapy

Medical myofascial trigger point therapy is suitable for the thorough diagnosis of acute and chronic conditions and for differentiating between joint-related complaints. Treatment can be performed manually or using dry needling and wet needling (with local anesthetic).

Osteoarthritis treatment

Osteoarthritis, a degenerative or trauma-related cartilage damage, is a progressive disease that can affect any joint. However, the diagnosis doesn't have to be accepted as inevitable. The inflammatory state of affected joints can certainly be influenced. Targeted joint injections (hyaluronic acid, ACP), acupuncture, dietary changes, physiotherapy, or orthopedic aids are just a few of the therapeutic options. In the early stages of osteoarthritis, it is also beneficial to treat and correct functional-biomechanical disorders (poor posture, incorrect loading).

Osteology | Osteoporosis

Osteology deals with diseases of the human bone. Besides metabolic disorders, genetic conditions, and tumors, the prevention, diagnosis, and treatment of osteoporosis constitute the

majority of osteological diseases. Osteoporosis leads to increased bone fragility. It most commonly affects postmenopausal women, but with increasing life expectancy, the number of male patients is also rising. Osteoporosis develops without symptoms until a fracture occurs. Therefore, timely diagnosis is crucial for preventive or therapeutic intervention.

Preventive medicine

Preventive medicine is not a traditional, specialized discipline. As human beings, we are exposed to varying degrees of stress in our daily lives, at work, and during sports. Our genes, diet, lifestyle, medications, addictive substances, and even stress and emotional strain all influence potential illnesses. We can identify and influence many of these negative and stressful factors. The goal is to prevent the development of diseases in the future or to delay their onset. If an illness is already present, secondary or tertiary prevention can still have a positive impact.

Post Covid Syndrome - Back to Sports

More and more patients are reporting symptoms following a Covid infection. Persistent fatigue and exhaustion, chest pain, and shortness of breath are typical symptoms. Covid can cause a wide range of symptoms as well as lingering inflammation in the body. When and to what extent can you resume sports? There is a great deal of uncertainty. We offer a comprehensive medical check-up after Covid. A medical examination, laboratory tests, and an ECG are standard components. We will advise you on returning to sports after a Covid infection.

Dance medicine / Musicians' medicine

We are particularly dedicated to the treatment of dancers and musicians. As a subfield of sports medicine, we work closely at the intersection of high-performance sport and art, expression, creativity, and aesthetics. Dancers and musicians are exposed to a very specific set of physical demands. We have many years of experience in caring for dancers and also provide medical care for the Zurich Dance Academy.

Dr. med. Manuel Haag

Medical Director & Specialist in Orthopedic Surgery and Traumatology of the Musculoskeletal System & GOTS Sports Physician

[Interview with Dr. Haag](#)

Dr. med. Christoph Lienhard

Specialist in Orthopedic Surgery and Traumatology of the Musculoskeletal System & Specialist in Joint Replacement and Forefoot Surgery

Rheumatology / Internal Medicine

Rheumatology – Individual care and state-of-the-art therapies

The rheumatological work of our doctors is based on the latest state of medical science and is complemented by modern diagnostic procedures and therapies.

But for us, the individual is paramount. A trusting and personal doctor-patient relationship is the foundation for successful treatment. We take the time for a thorough consultation, listen carefully, and develop an individualized treatment plan together with you. The goal is to alleviate pain, control inflammation, and sustainably improve your quality of life.

At functio med, we consider not only your physical illness, but also your personal needs, your life situation, and your future goals. A holistic approach is crucial for promoting your long-term health.

Our services encompass the diagnosis and treatment of a wide range of rheumatic diseases, including rheumatoid arthritis, psoriatic arthritis, spondyloarthritis, osteoporosis, and autoimmune diseases such as systemic lupus erythematosus. In addition to traditional treatments, we offer modern therapies such as injections with hyaluronic acid or PRP (platelet-rich plasma) and the innovative radiosynoviorthesis (RSO).

Our highest goal is to help you rediscover the joy of your body and movement. Following the motto "Mens sana in corpore sano" (A healthy mind in a healthy body), we want to accompany you on your path to a better quality of life.

DR. MEDIC. (RO) VIOLETA MARINESCU

Specialist in Rheumatology (Expert in Crystal Arthropathies) ✉ Specialist in Internal Medicine

Physiotherapy

Physiotherapy focuses on assessing, identifying, and maximizing a person's movement potential, as well as treating any existing pain. Prevention, maintenance, and promotion of health, alongside rehabilitation, are our primary goals.

Physiotherapy measures are normally carried out following a medical diagnosis and on the advice of a doctor, and are fully covered by health or accident insurance (basic insurance).

MEET OUR PHYSIOTHERAPY TEAM

Physiotherapy at our center consists of two main pillars:

Active (exercises, posture training, medical training therapy)

Passive (manual therapy, massage, ultrasound, manual joint mobilization)

Following a thorough physiotherapeutic examination, the therapist will create a treatment plan tailored specifically to you.

Pediatric physiotherapy from age 6

Functional. Active. Development-oriented.

The goal of pediatric physiotherapy at functionmed is the targeted improvement of balance, coordination, posture, and trunk activity in children aged 6 and older.

The therapy supports safe, functional movement in everyday life and sports, and strengthens movement quality, body awareness, and self-confidence.

indication

The pediatric physiotherapy offered by functionmed is aimed at children aged 6 and older with

difficulties in balance, coordination, posture, or trunk stability. It is suitable for children with motor insecurities, mild developmental delays without a specific diagnosis, and for athletically active children for targeted performance development and prevention.

Physiotherapy services / Self-pay

Everything we do revolves around you and your individual needs. We firmly believe that you have the right to participate in your treatment. That's why we offer tailored therapies and standardized testing procedures to guarantee you maximum results.

Our physiotherapists specialize in understanding your health goals and working with you to develop a treatment plan tailored to your needs. We take the time to thoroughly analyze your situation to identify the causes of your discomfort and implement the most effective therapies for you.

By investing in your health and choosing our self-pay physiotherapy, you are taking control of your health.

Schedule an appointment today and begin your journey to a pain-free, active life. Contact us to learn more about our services and find out how we can help you achieve your goals.

BACK ASSESSMENT	30 min	80.00
BACK BUILDING TRAINING	6 x 30 min	330.00

Manual therapy

Manual therapy is a core focus at our center. It is a treatment method used for both diagnosing and treating musculoskeletal disorders. A thorough initial assessment allows for a physiotherapeutic diagnosis, which then enables the development of an individualized and personalized treatment plan.

Dry Needling

Dry needling (dry needles) offers optimal support as a complement to physiotherapy in cases of muscle tension or pain. Very thin, barely perceptible needles are used to stimulate trigger points (muscle hardening). This releases tension, improves blood circulation, and reduces

inflammation.

Kinesio Taping

Kinesio Taping – For supporting muscle injuries. "Taping" is a functional bandaging technique. With correct and appropriate application, this bandage can relieve and support anatomical structures. Using the correct application technique, the tape provides psychological support and external stabilization for muscles, ligaments, capsules, fascia, and tendons.

Manual lymphatic drainage

Manual lymphatic drainage is a gentle decongestive technique that uses targeted hand movements to restore the flow of lymphatic fluid, reducing congestion in the tissue (e.g., swelling). In extreme cases, bandaging (a specific bandaging technique) may also be used. Compression bandages are applied to the affected area using a wrapping method. This can ensure faster and more lasting drainage.

@Home

Posture training (e.g., for working from home):

Correct posture at the workplace is important to prevent or minimize discomfort. We'll show you what to pay attention to, give you tips, and provide individual advice.

Exercises for home:

We will put together an individual training program for you to do at home.

Pelvic floor rehabilitation

The pelvic floor is a muscle group located deep in the pelvis and, like arm and leg muscles, can be trained, but it can also become tense.

This can lead to pain, instability in the pelvis and back, urinary and/or fecal incontinence, or erectile dysfunction. Through precise diagnosis, individualized exercises for contraction and relaxation, as well as for integration into daily life or training, are learned with the therapist.

Lactate step test

The aim of a lactate threshold test is to determine the current endurance training status. By

measuring blood lactate concentration during a gradual increase in workload, individualized training plans can be created and personal goals tracked for both patients and athletes.

Whether your goal is fat metabolism training, weight loss, increasing endurance capacity, or competition preparation, the results of a lactate threshold test allow us to define precise, heart rate-controlled training zones and provide corresponding training recommendations. Regular lactate threshold tests make it easy to monitor and document training progress.

Sequence

Kids Check-up

Especially during a child's growth and development phase, a lot happens to their body. It's therefore advisable to identify physical predispositions and changes early on and address any deficits to minimize the risk of accidents and overuse injuries in adulthood.

The Kids Check-up assesses the following areas:

current condition,
strength and mobility
, coordination and stability,
and orthopedic tests.

Medical training therapy

Medical training therapy (MTT) (valid for 3 months) is covered by basic health insurance and must be prescribed in writing by a doctor. The prescribed MTT includes the same services as

functional training.

Occupational therapy

Goals of occupational therapy

1. Improvement of **mobility, strength, coordination and dexterity**
2. Promoting **concentration, attention and perception**
3. Training in **everyday activities** (e.g. dressing, writing, working, cooking)
4. Support with **professional or school reintegration**
5. Advice and adaptation of **assistive devices, workplace or environment**
6. Strengthening **self-confidence and quality of life**

Indications

Occupational therapy is used for people of all ages whose ability to function is limited due to illness, accident, or developmental differences.

The most common indications include:

1. **Neurological diseases:** stroke, multiple sclerosis, Parkinson's disease, traumatic brain injury
2. **Orthopedic and rheumatological diseases:** fractures, osteoarthritis, tendon or nerve injuries, hand therapy

3. **Pediatrics:** Developmental delays, perception and concentration problems, learning difficulties
4. **Mental illnesses:** depression, burnout, anxiety disorders, stress reactions
5. **Geriatrics:** Maintaining independence and coping with everyday life in old age

Therapeutic approaches

The therapy is individually tailored to the needs and goals of the patients and can include various focus areas:

1. **Everyday life-oriented training** and functional exercises
2. **Hand therapy** to restore mobility and function
3. **Cognitive and perception-enhancing methods**
4. **Advice and adaptation of the environment** (assistive devices, workplace, school environment)
5. **Involving family members and the patient's environment** to support the success of the therapy.

The goal of the therapy

The goal of occupational therapy is to enable people to perform meaningful activities again – be it in everyday life, at work, at school, or during leisure time. Targeted therapeutic measures sustainably promote independence, quality of life, and participation.

Your information appointment about infusion therapy at functioned AG

Would you like to learn more about the possibilities and benefits of infusion therapy? In a personal initial consultation, our doctor and infusion expert will explain in detail how the therapy works, its applications, and how it can support your health. You will have the opportunity to ask all your questions and receive personalized advice.

Our infusion therapies can be used for various ailments and for general health promotion. Whether to strengthen the immune system, improve energy levels, or provide support for chronic conditions – we offer you customized solutions tailored to your needs.

Our doctor and infusion experts will take the time to discuss the most suitable therapy options with you. This ensures that you start your treatment well-informed and optimally prepared.

Arrange an initial consultation with functioned AG today and learn everything you need to know about infusion therapy.

We look forward to providing you with comprehensive advice and accompanying you on your path to better health.

Autologous fat tissue – your natural source for regenerative therapies

Innovative. Safe. Versatile.

Human adipose tissue is an exceptionally rich source of mesenchymal stem cells (MSCs), perivascular cells, immunomodulators, and growth factors. These components make it a key starting material for modern applications in aesthetic, orthopedic, and reconstructive medicine.

With the service from Swiss Stem Cells Biotech, this tissue can be extracted through a simple, outpatient liposuction procedure, professionally processed and cryopreserved in several portions – for immediate or future therapeutic applications.

What will be gained from this? Two highly effective regenerative products:

Mechanically purified lipoaspirate (microfat, nanofat)

Without enzymatic treatment, the body's own adipose tissue is mechanically purified in a closed system and processed into different densities. The tissue obtained in this way contains regenerative cells and growth factors that can be used specifically to support healing and regeneration.

Orthopedic applications:

- Support for degenerative joint problems (e.g., osteoarthritis)
- Regeneration of cartilage and connective tissue
- Treatment of tendon or ligament injuries
- Tissue filling for post-traumatic or post-operative defects
- Can be combined with PRP or SVF to enhance the effect

SVF – Stromal Vascular Fraction

The stromal-vascular fraction is isolated through enzymatic processing according to GMP standards – a highly concentrated cell mixture containing:

- Mesenchymal stem cells (MSCs)
- Pericytes
- Immunomodulatory cells
- Cytokines and growth factors

Orthopedic applications:

- Promoting tissue healing in chronic or acute joint damage
- Anti-inflammatory and immunomodulatory treatments for osteoarthritis
- Use in cases of non-healing injuries or overuse injuries

Process – simple, safe, repeatable

1. Liposuction – minimally invasive, outpatient, under local anesthesia
2. Laboratory processing – GMP-certified, with complete documentation
3. Cryopreservation – in multiple aliquot doses, individually available
4. Therapy – if needed, the doctor orders the product in the desired form and quantity.
5. Further applications – remaining material remains safely stored, ready for new treatments.

Why store it now?

- Single extraction, multiple uses – saves time, costs and additional interventions.
- Optimal cell quality – the earlier they are obtained, the more vital the stem cells.
- Personal biological reserve – available at any time for preventive or therapeutic applications

Swiss Stem Cells Biotech – Your partner for biobanking and cell-based therapies

Based in Switzerland and with Swissmedic-certified infrastructure, SSCB offers unique services in cell collection, processing, and storage.

Our partner physicians gain access to high-quality products, structured process support, and professional development through our CELLS Academy.

What are stem cells from adipose tissue?

Stem cells from adipose tissue – so-called mesenchymal stem cells – are cells with a high regenerative potential. They can repair tissue, inhibit inflammation, and promote healing processes.

How is the fatty tissue obtained?

The tissue is removed via minimally invasive liposuction under local anesthesia. The procedure takes approximately 30–45 minutes and can be performed on an outpatient basis.

What happens to the tissue after it is removed?

Part of the harvested fat tissue can be used directly during the procedure. The remaining portion is sent to a certified laboratory where it is processed under controlled GMP conditions and stored frozen in several portions (aliquots).

This storage allows for flexible and repeated use of the body's own resource – e.g., in later orthopedic treatments for the regeneration of joints, tendons or connective tissue.

Who is storage suitable for?

The storage of the body's own fat tissue is suitable for adults who wish to secure their regenerative cell resources for future medical applications – whether preventively or as part of a planned orthopedic treatment.

Storage is particularly useful for people who:

- wish to postpone or possibly avoid surgical or invasive treatment altogether,
- are expected to require several regenerative treatments and only want to have fat removal performed once.
- have little body fat and want to ensure that sufficient material is available for future applications,
- plan a therapy in the area of pain management, orthopedics or musculoskeletal regeneration in the foreseeable future.

What can the stored fatty tissue be used for?

The stored adipose tissue – or the cell products obtained from it such as microfat, nanofat or SVF (stromal vascular fraction) – can be used in various medical fields, especially in regenerative orthopedics.

Possible applications:

- Treatment of osteoarthritis and other degenerative joint diseases
- Support for chronic tendon and ligament injuries (e.g. tendinopathies)
- Promoting healing in postoperative or post-traumatic tissue damage
- Reconstructive procedures and tissue building in the periarticular area (around the joint)
- Improvement of wound healing and reduction of scars in an orthopedic context

Can the fabric be reused multiple times?

Yes. Thanks to storage in multiple portions, the tissue can be used for several treatments – without the need for a new extraction.

With each order, the product can be specifically prepared according to the treating physician's instructions for the respective medical purpose. This allows for different products and diverse applications over time.

How long can the tissue be stored?

Storage is indefinite, depending on the patient's wishes. The material remains usable for many years.

Is storage permitted in Switzerland?

Yes, storage and subsequent use are carried out in accordance with applicable Swiss regulations. All products are autologous (derived from the patient's own body) and are applied locally and homologously (for the same function).

How high are the costs?

The costs consist of a one-time sampling and laboratory processing fee, as well as an annual

storage fee. We will gladly provide you with a transparent price list upon request.

NUMO Orthopedic Systems AG

NUMO enhances performance and quality of life. With orthopedic solutions for everyday life, leisure, and competitive sports – Made in Switzerland.

The success of NUMO's orthopedic solutions is based on broad expertise and state-of-the-art infrastructure.

NUMO is among the pioneers of running and gait analysis. For over 20 years, we have built upon the findings of movement science and complemented them with our own practical experience: for precise and effective solutions.

COST

The costs for orthopaedic shoe insoles are generally covered by your outpatient supplementary insurance (category: assistive devices) - depending on the insurance level, partially or completely.

For reimbursement by your supplemental insurance, you generally need a doctor's prescription, which you should obtain before your appointment with us. Additional services, such as gait and running analyses, are only covered in rare cases. Please clarify any further questions regarding this with your supplemental insurance provider before visiting NUMO.

If you have any questions, please visit our website [NUMO](#) or contact us by phone at [+41 44 746 46 00](#).

Orthopedic shoe inserts

Our feet form the foundation for every movement. It's never too early and rarely too late to optimize them.

Sports & everyday work life

Repetitive tasks at work, as well as recreational sports with the wrong shoes, can cause pain. NUMO supports you with thorough analyses and customized orthopedic solutions.

Back pain or radiating pain in the hip area are common companions of the home office generation. And all too often, even exercise, intended to counteract this, is associated with problems like foot or knee pain. However, many of these symptoms are caused by misalignment, which, combined with overuse, triggers the pain.

Maintain and increase performance.

These pains are an early warning sign and should be taken seriously, even if they subside temporarily. Early optimization of movement patterns can prevent inflammation or wear and tear. Properly fitting running shoes and custom-made insoles are key to a healthy and high-performing body in the long term.

Children & Young People

As the body develops, misalignments become visible and often noticeable. At the same time, growth offers a unique opportunity to perfectly balance the musculoskeletal system using shoe inserts.

A large proportion of children exhibit gait abnormalities. The most common are knock-knees (genu valgum), walking on the balls of their feet, or walking with their toes turned inwards. Even if minor misalignments often correct themselves, orthotic support is worthwhile to ensure optimal development. Puberty, in particular, offers the ideal time to correct these misalignments.

Growth without joint pain.

Especially athletic teenagers are regularly plagued by nighttime pain in their legs, feet, or knees. Instead of staying away from school or club sports during a growth spurt, we recommend first analyzing movement patterns. In our experience, growing pains are usually caused by misalignments that are easily corrected.

Active in old age

Those who have been active their whole lives are unlikely to slow down in retirement. Others, on the contrary, are even more eager to use their newfound free time for exercise. NUMO shoe insoles help you stay pain-free while doing so.

Even though long hikes or bike rides can still be enjoyable, the body increasingly signals its needs with age. The decreasing elasticity of the muscles causes joints to tire more quickly and can lead to pain in the feet, knees, or hips. However, premature wear and tear on the joints can often be avoided.

Relieve pressure on your joints with shoe insoles.

Pain isn't simply a part of aging; it's an important warning signal from the body. Our

comprehensive gait analysis gets to the root of the problem. With the right shoes and custom-made insoles, painful areas can be relieved and movement patterns optimized – for a pain-free lifestyle.

competitive sports

Only when the musculoskeletal system is perfectly aligned and confidence in the body is intact can full performance be achieved. NUMO sports insoles are the key to an injury-free sports career.

Inflamed Achilles or plantar fascia, runner's knee, a tight piriformis or hamstring: For many athletes, pursuing their passion is associated with constant pain. Yet many chronic injuries are simply caused by a slight misalignment that can be corrected with an orthotic solution. If left untreated, however, such imbalances in the musculoskeletal system can resurface with every increase in training intensity.

Motion analysis under real-world conditions.

At NUMO's labs, experienced specialists in movement science work on high-tech shoe insoles for elite athletes. The data for this is provided by various measuring systems, such as the Conica-Track, equipped with high-speed cameras and modeled after a real sprint track. We support professionals from almost every sport – from athletics and cycling to freestyle skiing.

Running and gait analysis

Based on state-of-the-art measurement techniques on the treadmill or our indoor track, we can

optimize the gait pattern.

Sports shoe advice

Take advantage of our advice on running and sports shoes and compare different shoe models.

Products

We improve your quality of life and performance through biomechanical analyses and orthopedic solutions. Here you will find an overview of NUMO's services.

everyday insoles

NUMO everyday insoles are custom-made for you. Designed to be as thin as possible, they fit into normal shoes while still achieving the desired effect.

Sports insoles

Custom-made sports insoles from NUMO benefit you in two ways: They protect your joints and simultaneously improve the efficiency of your movements.

Custom-made sandals

Glabbal sandals are manufactured in various designs by our shoemaking workshop and optimally adapted to your foot by orthopaedic technicians.

Orthopedic aids

To enable you to go about your daily life without discomfort and safely, we offer a comprehensive range of orthopedic aids, including bandages, orthoses and compression therapy.

HOMEOPATHY

PraxisGlobuli@functionimed

Services offered:

Depression, sleep disorders, chronic fatigue,
anxiety, behavioral disorders, learning difficulties in children,
allergies, neurodermatitis, warts, eczema, asthma
, flu, colds
, migraines and other recurring complaints,
digestive disorders
, rheumatic complaints, back pain ,
blood pressure and cholesterol problems
, menstrual problems,
problems during pregnancy, postpartum,
3-month colic

Passion

Meine Passion ist eindeutig die 5 Elemente Akupunktur. Das Verständnis der 5 Elemente hilft mir nicht nur zu erkennen, auf welcher Ebene ein Mensch Unterstützung braucht. Es hilft mir auch zu verstehen, weshalb wir Menschen so sind, wie wir sind, wo unsere Stärken und wo unsere Schwächen liegen, und wie wir unser Leben möglichst gesund und zufrieden leben können.

Sprachen:

Deutsch

Französisch

Englisch

Italienisch

AKUPUNKTUR

Die Chinesische Medizin wird seit vielen Jahren auch bei uns in Europa erfolgreich praktiziert. Bekannt ist sie unter dem Kurzbegriff TCM. Zur Traditionellen Chinesischen Medizin gehören die Akupunktur, die chinesische Kräuterheilkunde, die chinesische Ernährungslehre, Tuina und Qi Gong.

Die Chinesen sagen, dass ein Mensch dann gesund ist, wenn Yin und Yang im Einklang stehen und das Qi ungehindert fließen kann. Krankheit wird denn auch verstanden als ein

Ungleichgewicht, als ein Übermass oder ein Mangel auf einer bestimmten Ebene.

Diese Ebene kann körperlicher, geistiger oder seelischer Natur sein. In der Chinesischen Medizin wird der Mensch immer als Einheit von Körper, Geist und Seele betrachtet. Körper, Geist und Seele sind untrennbar miteinander verwoben. Eine Erkrankung auf körperlicher Ebene wirkt sich auch auf unsere Psyche aus, das wissen wir alle aus Erfahrung. Genauso erleben wir immer wieder, dass sich eine psychische Belastung über längere Zeit körperlich niederschlägt.

Tuina

Tuina ist für alle, die Nadeln nicht mögen und doch von den fernöstlichen Heilkünsten profitieren wollen. Tuina ist eine chinesische Massageform, die auf der traditionellen chinesischen Medizin beruht. Mit diversen manuellen Techniken kann der Energie-Fluss mit Tuina positiv beeinflusst werden, Blockaden lösen sich auf und Körper und Seele kommen in Einklang.

Kinder Tuina

Kinder-Tuina ist eine Behandlungsform der Traditionellen Chinesischen Medizin, welche speziell für Babys und Kinder entwickelt wurde. Die jungen Patienten geniessen diese sanfte und effektive Massageform. Mit Tuina unterstützen wir den noch nicht ausgereiften Organismus und fördern die gesunde Entwicklung der Kinder. [Weitere Informationen](#)

Narben entstören

Narben können den Energiefluss in unserem Körper erheblich stören. Egal ob innerlich, äusserlich oder seelisch - Narben stören oft unser Befinden und sind manchmal Ursache für sonst unerklärliche Krankheitssymptome. Mittels eines effizienten Tests stellen wir fest, ob und wie eine Narbe den Energiefluss stört und welche Behandlungsmöglichkeiten sich anbieten.

erpse Institute - Nutritional Diagnostics

Apprenticeship as a plant mechanic,
certified fitness trainer
, certified functional trainer
, certified workout trainer,
nutritional diagnostician

Gregory's services

include not only supporting individuals interested in living a healthier life with personalized nutrition plans, but also athletes from many other disciplines – from recreational and amateur sports to competitive sports. The former cyclist has also specialized in endurance sports and embraces the challenge of athletic training. With these skills, Gregory can provide even more targeted support to his clients.

fitamara - Practice for Nutrition and Health in Zurich

Certified Nutritionist, Certified
Epigenetics Coach,
Certified DNA Expert Nutrition & Health

Services offered:

Classical nutritional counseling,
Personalized nutritional counseling (genetic testing for nutrition),
Personalized performance enhancement (genetic testing for sports),
CRS metabolic analysis
, HRV biofeedback training,
Epigenetics coaching

Passion:

My passion is individuality. Health is far more than just the right diet or a good training plan. People are individuals, and that's precisely why there are often no one-size-fits-all answers when it comes to physical well-being. My passion is to make the complexity of health and its influencing factors understandable, to motivate people, and to show them how they can find their own personal paths to more energy, health, and joy in life. It's not about perfection, but about understanding your own individuality and using it to your advantage. Perfectly imperfect!

Languages:

German,
English

fitamara - Practice for Nutrition and Health in Zurich

We utilize the latest scientific findings and consider all factors that influence your well-being and health. You, your uniqueness, your genes, and the factors that regulate them are at the heart of our approach.

OFFER:

HRV Biofeedback – Stress is measurable. Learn how to regulate stress hormones, gain resilience, and activate self-healing.

Epigenetics Coaching – 70% of health is epigenetically determined, and that's precisely how we create your healthy tomorrow, TODAY.

Epigenetics is the science that makes it possible to understand and manage health holistically. In this coaching program, we use these groundbreaking insights to maintain or regain your health.

CRS metabolic analysis – what would your body tell you if it could speak? Find out with a CRS analysis!

Nutritional advice - In today's world, healthy eating is more than just a question of calories – it requires knowledge about one's own individuality and the ability to distinguish between food and sustenance.

FUNCTION COURSES

The courses offer diverse, varied, and dynamic group lessons with plenty of fun and high quality. The goal is to promote your health preventively and effectively.

The courses take place in small groups, allowing for individual attention to each participant. Please check with your health insurance provider to see if your policy covers the costs.

The course instructors are Qualitop certified.

On our [YouTube channel](#) you will find online courses for home.

WALK function

In our group, community is paramount. We motivate each other, share tips for improving walking technique, and ensure that every participant feels comfortable.

Health benefits:

Walking combined with targeted exercises offers numerous health benefits, including:

Improvement of cardiovascular health,
promotion of joint health,
strengthening of muscles,
improvement of flexibility and mobility,
promotion of relaxation through breathing exercises

Participation made easy:

- **Regular meetings:** Every Tuesday, 9:45-10:45 a.m.
- **Meeting point:** Main entrance, Langgrütstrasse 112, 8047 Zurich
- **Introductory lesson:** free
- **Subscriptions:** 5-session subscription for 125 Swiss francs / 10-session subscription for 220 Swiss francs
- **Flexibility:** No registration required
- **Equipment:** Please bring Nordic walking poles if you have them.
- **Requirements:** 30 minutes of walking without a break
- **Expert guidance provided by certified physiotherapists:** Sarah Gumann, Marina Schürmann, Anna Brandner, Lea Wiler
- **Weather:** The group meets outdoors regardless of the weather.
- **Insurance:** Is the responsibility of the participants.

Interested? If so, please report to reception.

functionmed AG is Qualitop-certified.

The Qualitop label is the seal of approval for quality in exercise and health promotion. Most health insurance companies contribute to your subscription for preventative care. You can find out which health insurance companies contribute financially to the subscription at [qualitop.ch](https://www.qualitop.ch).

If you have any questions about price adjustments or our new offers, our team will be happy to assist you. We thank you for your trust and look forward to continuing to support you on your health journey.

The new prices and subscriptions will apply from 01.01.2025 and can be obtained from the functional reception as before.

Medical Training Therapy (MTT)

MTT (valid for 3 months) is covered by basic health insurance and must be prescribed in writing by a doctor. The prescribed MTT includes the same services as functional training.

This offer only applies to prescriptions that can be billed through the health insurance fund (KVG).

OPENING HOURS TRAINING AREA

Mon – Thurs 07:00 – 19:00

Friday 07:00 – 17:00

Saturday 08:00 – 15:00

FUNCTIONSPORT

funcniosport provides medical and advisory support to top and competitive athletes in their competition preparation, the regeneration phase, and the return to training after injuries or illnesses.

funcniosport is aimed at individual as well as team and squad athletes. With funcniosport, athletes who are consciously working towards a goal receive holistic support, so that nothing stands in the way of their success.

Our various specialists work hand in hand with each other and with external trainers. This allows you to fully concentrate on your training and simultaneously utilize the important recovery time without having to coordinate your different specialists during this phase. In an initial consultation with an orthopedist or osteopath, we can determine the best therapy for you or your team.

Would you like to be part of the funcniosport

team?

Whether you are a top athlete, a competitive athlete, a hobby athlete or a club, our offer and support is as individual as you are.

Are you looking for a medical partner with therapeutic experience or a team doctor for medical support?

The range of services offered by the outpatient medical institution functionomed GmbH - Center for Functional Medicine - with over 50 therapists and doctors in the fields of osteopathy, physiotherapy, orthopedics, sports medicine, trauma surgery, running and gait analysis, vitamin infusions, acupuncture, homeopathy, mental coaching, nutritional advice/diagnostics and massage, provides individual solutions for individual athletes as well as for clubs.

Are you interested in becoming a functional athlete and part of the team? Then contact ursula.baumberger@functionomed.ch or +41 44 401 15 15

Your benefits

- 24-hour emergency service: From Monday to Saturday, athletes receive an emergency appointment within 24 hours. This could be with a physiotherapist, osteopath, or sports physician/orthopedist.
- Emergency room fees are waived and will not be charged.
- Consultation with a caregiver or sports physician via WhatsApp or email
- We make the connection! functionomed supports athletes in finding suitable offers and contacts.
- The functionomed training area is freely available
- use the functionomed network

Your consideration

- If possible, depending on your club's contract terms, functionimed is the first choice in the medical and therapeutic field.
- The athlete regularly participates in competitions.
- The athlete maintains a presence on social media (Facebook, Instagram, LinkedIn, etc.) in connection with functionimed.
- The athlete provides image material for advertising purposes to functionimed GmbH - Center for Functional Medicine.
- Mutual linking on the athlete's homepage, as well as on functionimed
- functionimed may mention the athlete or club by name on the official functionimed homepage or LinkedIn.
